Konstantinos Lianos

Angular Expert

Voúla, Attiki, Greece

Summary

Freelance Software Architect | Angular Specialist | Performance Optimization Expert

I am a highly specialized software architect and frontend expert, passionate about delivering top-tier solutions as a contractor—bringing my expertise to organizations that need scalability, performance, and modernization without long-term strings attached.

With over a decade of experience in software development, I specialize in architecting, optimizing, and modernizing large-scale web applications, particularly in the Angular and JavaScript ecosystem. My goal is to help teams accelerate their development, solve complex technical challenges, and drive innovation—on demand.

What I Offer as a Contractor

Architecture & Optimization – Crafting scalable, high-performance web applications tailored to business needs.

Rapid Modernization – Migrating and upgrading legacy systems with minimal downtime.

Performance Tuning & UX Enhancements – Implementing lazy loading, IndexedDB caching, and advanced data manipulation for superior user experiences.

Team Enablement & Best Practices – Training teams, mentoring developers, and instilling software excellence.

Flexibility & Efficiency – Providing expert solutions without the overhead of long-term commitments.

Key Achievements

Led the Angular modernization of a critical EU regulatory platform, upgrading from Angular 6 to 14, introducing NRWL Nx, and migrating test suites to Jest and WebdriverIO.

Pioneered performance optimizations, significantly reducing load times for complex dynamic forms using advanced lazy-loading techniques.

Designed frontend architectures for multiple organizations, transitioning systems from Java-based stacks to modern JavaScript frameworks.

Mentored and trained developers, ensuring high coding standards and best practices in Agile environments.

Tech Stack

Angular | TypeScript | JavaScript | Node.js | Nrwl Nx | Jest | WebdriverIO | Spring MVC | Agile (Scrum/Kanban) | Jenkins CI/CD

If your company or project needs a high-impact specialist to unlock performance, modernize applications, or optimize frontend architecture, let's connect! I'm available for contract-based work and ready to bring immediate value to your team.

Experience

Vimachem - IIoT Pharma 4.0 AI Platform

Senior Frontend Software Engineer

March 2026 - Present (6 months)

Athens, Attiki, Greece

TRASYS GREECE

6 years 4 months

Software Architect

May 2022 - March 2026 (3 years 11 months)

Athens

Senior Software Engineer

December 2019 - May 2022 (2 years 6 months)

Athens

At TRASYS, I lead the UI development and optimization of IUCLID, a major distributed software system for ECHA. My work focuses on Angular development, architectural decisions, and system performance enhancements. I have led the migration of the end-to-end testing suite from Protractor to WebdriverIO, introduced NRWL Nx with tags and module boundaries for better modularization, and upgraded the system from Angular 6 to 21—a

modernization effort I have driven entirely. Additionally, I replaced Karma/Jasmine with Jest, significantly improving test speed and reliability.

A major challenge I tackle is performance optimization. The core view of the app, a massive dynamically generated form, is built from a JSON configuration sent from the backend. To ensure smooth performance, I have implemented lazy loading for all controls, significantly reducing load times. I also leverage advanced graph manipulation techniques and IndexedDB caching strategies to enhance data efficiency.

Beyond my technical contributions, I play a key role in hiring and mentoring new developers, ensuring best practices across the team. I work within an Agile environment with two-week sprint cycles, utilizing Jenkins CI for continuous integration and automated testing.

blueground co

Software Engineer

March 2018 - December 2019 (1 year 10 months)

Athens, Attiki, Greece

Hired to be a JAVA software engineer, but soon enough my JS skills became apparent, resulting in being transferred to a JS "Architect" role. My responsibilities involved to make architectural and technological decisions, in order to generate a modernized fronted experience for the company's internal ERP system.

Outside the technical scope, got involved with hiring (interviews, assessments, etc.) and training junior team members. Moreover, the department has adopted the agile methodologies, providing with great experience around SCRUM and KANBAN

SingularLogic

Software Engineer

May 2017 - March 2018 (11 months)

Athens, Attiki, Greece

Chosen to be part of a newly formed team with the mission of exploiting all modern web technologies in order to deliver fully web based solutions. Had the opportunity to work daily on learning and polishing my skills with Angular 4 and the accompanied stack (Typescript & Webpack). These technologies were used for the creation of enterprise systems targeted for accounting and provisioning tasks.

IRI

Software Engineer

June 2015 - May 2017 (2 years)

Athens, Attiki, Greece

Heavily involved with the implementation of analytics web solutions. My main focus was the constant development of the Front-End Architecture which needed to handle big data due to the nature of the industry. A big milestone was the recognition of my work, which resulted in the reallocation of my focus from the needs of one project, to the production of many small solutions which would be utilized by other teams as well.

My experiences in IRI, provided me with great insight into the modern Agile methodologies of software development. The daily project management was governed by the Scrum framework, which included remote conferences with people of different nationalities and the utilization of tools such as Jira.

Cognity

Junior Software Engineer

October 2014 - June 2015 (9 months)

Athens, Attiki, Greece

Actively developed and maintained functionalities on TELCO-related projects, on behalf of the largest telecommunications organization in Greece, O.T.E – Cosmote. These projects, heavily utilize Java Spring and integrated with third-party systems such as Siebel CRM, Service BUS systems, etc, via web and rest services. In addition to various small changes implemented on middle-ware software, the main projects of interest were: (1) OTE's e-shop & integration system, (2) Cosmote's online billing system, and (3) Syzefxis II.

Hellenic Army

Information Systems Researcher

November 2013 - August 2014 (10 months)

Chios, 96 HIGH MILITARY COMMAND

Solely developed a web application, which grants fast and efficient access to data, concerning enemy naval and air force. The main technologies utilized were HTML5, JavaScript, jQuery and Json data structures. This application is currently being run on all posts of the Aegean which have an observational mission. For this, the Chief of army staff has issued an official thanks.

Moreover, great experience was obtained on computer hardware repairs and network maintenance.

Holic

Software Developer Internship

August 2011 - November 2011 (4 months)

Athens, Attiki, Greece

For a small period of time, I assisted with a friend's startup. There I was involved with the creation of the back-end infrastructure, which gave me the opportunity to work with C#, .NET and WCF for a restful API.

ALEYU

Web Developer Internship

November 2010 - July 2011 (9 months)

Liverpool, England, United Kingdom

During the time I studied in Liverpool, the university was exchanging students with Shanghai's XJTLUniversity. A group of Chinese classmates started a business where they were converting Chinese styled websites to European, both from a UI and linguistic perspective. They approached me to assist with the CSS styling and JavaScript coding, ending up working together throughout my entire final year.

This experience provided me with great insight on how different countries (China) conduct business. Needless to say my communication skills were greatly enhanced.

Education

London School of Economics and Political Science

MSc Management, Information Systems and Innovation (MISI), Management Information Systems and Services · (2012 - 2013)

University of Liverpool

Computer Science, Computer Science · (2008 - 2011)

Ministry of Agricultural Development and Foods (Greece)

CERT Meat Technician, Food Technology and Processing · (2011 - 2012)

4th General Lyceum of Chalandri

National High School Apolytirion, Pathway: TECHNOLOGY, Cycle:
COMPUTER SCIENCE and SERVICES · (2005 - 2008)
